

ENGINEERING CONSULTANT

Date: July 2018

Office: Madrid

Job Function: Engineering / Consulting

Employment Type: Full Time - Permanent

Job Description

This role is to support the underwriting functions at our RSA office in Madrid. The main responsibility of the Risk Consultant will be to perform loss prevention surveys at client sites in order to assess the risk quality regarding property damage and machinery breakdown. The subsequent reporting from these surveys will help to improve the risk profiles of our clients and will feed into the renewals of the client policies. This role contributes to the development of customer propositions, bringing knowledge and insight of customers and risks in order to identify opportunities and benefits. It will be also required to manage customer interactions in an efficient, courteous and timely manner in order to deliver high standards of customer satisfaction. Some office-based study work will also be required, to assess new business prospects and new equipment / installations at client sites. The work will involve travelling throughout Spain, plus wider travel within Europe and occasional travel outside of Europe.

Desired Skills and Expertise

The candidate should have a degree in engineering or a related subject. Ideally this should be reinforced by at least 5 years of industrial experience gained in the power generation sector, for example conventional turbine or engine plants, renewable energy, electrical transmission etc. It would be desirable that the candidate has experience in large risks Insurance Company. Experience of working directly with customer in customer service environment. Strong analytical, relationship management and communication skills. A proficient level of English language is required since most reports will be written in English. A willingness to travel and to work in a variety of industry sectors is essential.
